Box Hill, Melbourne 3128

Summary

I am seeking an opportunity to further my career in computer science. I want to develop in many areas of computer science and already have some experience as a software developer as well as an IT support consultant. I have completed my Bachelor's of Information Technology from RMIT University which, along with previous work experience in customer service, has equipped me with a range of coding and problem-solving skills combined with a variety of practical and interpersonal skills. I have a strong drive to further learn and expand my knowledge base so I can drive business success through technology solutions.

Education

<i>RMIT</i>	(2022)	Bachelor of Information Technology	Melbourne (City)
	(2017)	Diploma of Information Technology	
	(2016)	Certificate IV in Marketing	
<i>De La Salle College</i>		VCE	Malvern

Technical Skills

Languages & Frameworks: Java, HTML5, SCSS, JavaScript, TypeScript, C, PHP, React, Angular, SQL, JSON, BASH, Laravel

Database & Networking: RDBMS/NoSQL, Stored Procedures, Views, TCP/UDP, DHCP/Static IP/PPPoE, DNS, Email Protocols, HTTP/S, S/FTP, ISO Model

Cyber Security: VPN, SSL/TLS, Hashing, Data Encryption Standards, MFA/2FA, Public Key Cryptography, Data Validation

Development Tools & Environments: Git, Jira, JUnit, MaterialUI, WordPress, Virtual Machines, REST API, AWS, cPanel, VPN, MAC/HMAC, CMD/VIM

Operating Systems: Windows, Mac, IOS, Android, Ubuntu, Kali Linux, PopOS

Experience

Mailforce | Driver

Apr 2024 – Feb 2025

Working for Mailforce was a casual job I was doing while I looked for a position in IT again. My responsibilities included delivering packages for places such as ambulance depots, police stations, pharmacies, health clinics, car dealerships and more. This was a full-time position in terms of a 40 hour work week, which offered me good job security while I pursued my career.

Aussie Broadband | IT Support Consultant

Oct 2023 – Mar 2024

I worked at Aussie Broadband in customer service working as an IT Support Consultant. My responsibilities were to troubleshoot and resolve issues customers were having with their internet service, attend account related issues and other non-technical related issues. At Aussie Broadband company we serve both the Aussie Broadband and Origin Energy customer base. This position has taught me to be highly organised, multitask, to understand the customers inquiries and solve them efficiently as to maintain high levels of customer satisfaction.

- Helping customers set up their internet connection or resolve any connectivity issues they were experiencing.
- Trouble shooting dropouts, speed, latency or connectivity problems and determining if the issues need to be raised to the NBN/Opticomm for a field technician to resolve.
- Administering billing and account enquiries like paying overdue invoices, banning or unbanning customers, making a change to a customers plan, explaining their billing, performing transfer of ownerships, cancelling their service, etc
- Helping customers with the administrative side of their accounts like email problems, MyAussie or Origin account problems, personal details or mobile issues
- Providing information on the status of faults, outages or complaints
- Performing tasks in my spare time that are either emails from customers or tickets we have made ourselves that need to be actioned.

Beige Technologies (Alinta Energy) | Junior Developer

Mar 2020 – Apr 2021

I worked for a company that was sub-contracted by Alinta Energy to create a billing application to serve their commercial and industrial clients. This was my first paid job in the industry, and I learnt an incredible amount about coding practices, working as a team, problem solving and critical thinking. My main responsibilities were to complete business requirements that were allocated to me using Jira. Often, we would sit down and discuss the finer details of how the tickets were to be implemented and regularly checked up in case there were new requirements or if the existing requirements had changed. The technology stack that I worked with included Angular, TypeScript, PHP, SCSS, JSON and SQL.

- Becoming familiar with business workflow methodologies, working in an agile development environment.
- Used Jira for project management and git for source control.
- Worked on the front-end coding and upgrading custom components, directives and elements to meet business requirements.
- Gained an adept ability to code in Angular, TypeScript, PHP, HTML5, SCSS.
- Upgraded code from AngularJS to Angular 8+ where necessary.
- Gained valuable experience in utilizing RESTful APIs used in the billing application.
- Worked with stored procedures in SQL for use in retrieving data from MySQL.

Get Noticed Digital Agency (Internship) | Web Developer

Jul 2017 – Dec 2017

I worked for a while at a digital agency as an intern. This was a start-up business, they offer web development and media/marketing solutions for small to medium businesses. My primary work here was to write and maintain responsive websites along with the business website. Here I learnt the fundamentals of turning business requirements into code and working in a team to collaborate and deliver a product together.

Ramsay Health Care Ltd | Business Clerk

Jun 2014 – Jun 2017

I worked for Ramsay Health Care Ltd at The Avenue Hospital (located in Windsor). This position was the most demanding in regards to the standards of customer service and enabled me to gain many valuable skills in the service industry that can be transferred into many other positions. Some of the most prominent things I've learnt from this role was mainly centred around communicating simply and effectively and presenting myself as a friendly and approachable person. I also learnt how to work under pressured timed conditions as patients were often admitted only a couple hours before surgery and we often admitted patients in blocks at certain times. If I was slowing the doctors would need to wait for me so it was fundamentally important that I was able to work under these conditions.

- Admission duties which require taking payments from patients as well as signing documentation.

- Data entry and room allocation. I was required to verify and update patient details and book them into their allocated room.
- Handling significant amounts of cash and being responsible for completing transactions which, along with data entry, helped me develop my ability to pay attention to detail
- Pre-admission duties which require calling patients and entering patients' relevant information for procedures scheduled in the near future.
- Reception/Switchboard duties.
- Providing excellent customer service and having great communication skills.

Projects

Booking System (Java) – in GitHub

Personal Website (Angular) - <https://www.danielbellino.au/>

Guess Who Game (Java) – in GitHub

Stock Market Simulation (ReactJS) – <https://monopoly-shoe-crypto-trader.firebaseio.com/>
